

New science, technology and athletic facilities, and a bold new front door for an iconic SF school

UNIVERSITY HIGH SCHOOL

Location

3150 California Street, San Francisco

Project

49,000 SF
Educational and Athletic Facilities

Completion

2025

Architect

Leddy Maytum Stacy Architects

Financing

Bank Loan
Capital Campaign

University High School undertook a Master Planning process in 2018 to evaluate how to best serve their students, faculty and staff within their existing facilities, and to enhance their campus experience through the development of a property that they own at 3150 California Street.

ECB was hired to manage the development of the California Street property, to meet both the academic and athletic needs of the school and create classrooms and gathering spaces that respond to the needs of 21st Century teaching and learning best practices.

The new California Street building will serve as a visible and welcoming second “front door” to UHS along the transit-rich California Street corridor.

This new building, of approximately 49,000 square feet, is expected to go through a full review and entitlement process with the City of San Francisco Planning Department, which may take 1-2 years.

When complete, the project will include 6 new science labs, 4-6 new classrooms, U-Lab and faculty and administration offices, 3,000 SF of indoor commons with flexibility for programming, a 6,000 SF terrace, and basketball courts (both a competition size court that meets NCAA standard dimensions, as well as cross courts).

ECB is acting as the project manager for the entire development process, including entitlements, design, permitting, bidding and contracting and construction.
